

Kerbal Space Program - Bug #27133

Parts attached to rotation servo M-06 act weird upon mounting stage or loading

Expansion:	Breaking Ground, Core Game, Making History		

Description

I made a rover whose wheels are attached to a rotation servo m-06, and when loading a quicksave, or selecting it from the space center, the parts attached to said servo appear to lose position, and end up in the middle of the rover. I will add files with the rover and the quicksave.

Files

quicksave #25.loadmeta	399 Bytes	01/24/2021	maxisalamone@gmail.com
