Description			
I get it we will not see ksp in VR ever, but...			
if we would get SBS feature, people with 3D monitors can view game in 3D AND people with VR glasses would see 3D with using Big Screen Beta-like theatre programs.			
Tomb Raider couple later games has SBS support and it works great, even being third person.

And there is some programs which emulates VR head tracking into TrackIR inputs, which KSP currently supports partly, obviously only 3DOF.
