Platform:	Windows	Mod Related:	No
Expansion:	Breaking Ground, Core Game, Making History		

Description

When in flight or orbit after a while the up left time controls are not working/responding to mouse.

The keyboard controls still work for warping but the top left is not working at all.

Full stock, no mods. It seems to happen after i decouple or just do an action while in flight.

The toggle time mode button works and if i go to tracking station and back etc everything works fine again.
