

Kerbal Space Program - Bug #27550

Scale is installed on the wrong directory

04/19/2021 07:39 PM - alede

Status:	New	Start date:	04/19/2021
Severity:	Low	% Done:	0%
Assignee:			
Category:	Application		
Target version:			
Version:	Not Applicable	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:	Core Game		

Description

Every time I load up the game, it gives me the error in the screenshot I uploaded. It happens right when opened. I looked in the filesystem and I can't find scale.

History

This message is not coming from stock KSP and it's best not to bother the KSP developers with it. This message is coming from the mod called TweakScale.

It's telling you you installed it (Tweakscale) in the wrong place, one folder too deep.

[1] You have a folder called GameData.

[2] Inside that you also have another folder called GameData.

[3] Inside that you have Tweakscale.

That's wrong. level [2] shouldn't be there. Tweakscale should be inside the first GameData. That's what the message is telling you.

The reason it's a fatal problem is that it means Tweakscale won't have been loaded correctly, and THAT means if you use any vessels with any parts Tweakscale has altered, the alterations won't be there and so stuff won't **fit** - vessels will revert their parts to their stock part sizes and shapes when you try to load them, and nothing will join up right - stuff can explode because of that.

Developers can't make anything for these mod related things, you have to check these yourself when installing mods and you just have to make sure everything installs properly. Its problem with mod maker not developer.
