<b>Category:</b>	Action Groups		
<b>Target version:</b>			
<b>Version:</b>	1.11.1	<b>Language:</b>	English (US)
<b>Platform:</b>	Windows	<b>Mod Related:</b>	No
<b>Expansion:</b>	Breaking Ground, Core Game		

#### Description

As shown in the screenshots, there is no option to assign the thrust limiter of vernor engines to a custom axis. This also applies to all other thrusters.

I have some uses for this, none of which are really critical, but would make my gameplay more comfortable. It just seems like a strange omission, especially when the SAS seems to throttle vernor engines down to some extent.

My uses:

- Precision docking when building space stations
- Precision vector alignment so the ship doesn't drift too far during EVA construction
- Precision manouvering where this cannot be achieved by thrust-limiting the engine

Version is given by the launcher as "3077". I think that corresponds to 1.11.1, but I'm not sure.

#### History

##### #1 - 04/22/2021 12:21 AM - eekee

I feel a bit foolish now. I loaded up another ship the same size as OrbiTank (the orange one pictured), and found I'd already fitted a second set of much smaller thrusters. I added an action group to toggle the thrusters between large & small, & was good to go. (Great start for my first bug report here: it looks entirely unnecessary.)
