Description

So this happened.... lol

I was building this (obviously) sexy ship and think I smashed the "zxcv" area of the keyboard and clicked something while distracted. It stayed that way until I clicked launch. Didn't seem to actually burn any fuel, but there was flame and physics stuff happening.

History

#1 - 07/13/2021 12:42 PM - Deepspeed

This happened again, but with a liquid-fueled engine. I clicked the engine to throw it away and it started showing exhaust flames.
