Description

If it were last patch please let us know.

I am pretty sure modders would take things over and fix things posted here.

Modders are quite silent and cautious for waiting next ksp fix. they have been so for 10 years. so when you really next time say which patch is final, do say so, so modders can begin truly.

1.12 was last major step release. But they said small fixes will still be worked on. Read the post.
