Description

I always use -nopopupwindow to make KSP1 borderless

The new Launcher blocks this from working with KSP1.

Same issue for me, but I use -popupwindow not -nopopupwindow. Is there a difference? -nopopupwindow doesn't seem to work for me.

Anyways, a workaround is to call KSP_x64.exe directly in the launch options, then you can bypass the launcher and continue to use the cli flag.

In the meantime, I'm upvoting this issue

Oh oops. How did I end up with -nopopupwindow? You are right it should only be -popupwindow

Same issue via the launcher; new launcher removes the "fake fullscreen" from the advanced options, which is exactly -popupwindow.
