

Kerbal Space Program - Feedback #3376

SP+ Wingtips should have a blunt Attachement-Surface

10/18/2014 08:56 AM - MalfunctionM1Ke

Status:	Needs Clarification		
Severity:	Low		
Assignee:			
Category:	Parts		
Target version:			
Version:	0.25	Language:	English (US)
Platform:	Win32	Mod Related:	No
Expansion:			
Description			
<p>The former Wings like the DeltaWing had a blunt Wingtip that allowed to attach RCS-Ports on them that were aligned with the direction the Wing was attached to the Fuselage of the Plane. (Figure 1)</p> <p>With the new SP+-Parts this is not the case anymore. RCS-Ports (or other smaller parts) attach now with the surface of the leading edge or the outlet edge. (Figure 2) Sketchwork attached (Figure 3)</p> <p>The attachement Area should have a small blunt area on the Wingtip like the actual model of the wing has. This would make it a lot easier and more ergonomic to attach small Parts on an area of the new Wings that looks very inviting to do so.</p>

Yes. Currently is difficult put something aligned in there. If we can't get a "blunt" attachment surface there, would be good if we could place a part exactly in the corner and align the part with the planned gizmos.

The newly revised Editor and the "Gizmos" should make placing parts easier now.

Please provide some feedback on how these are working to achieve your construction?

Hi Squelch,

the Gizmos do not chance any of the problem. If you want to place an RCS-Port for example in a 90° angle to the direction the plane is traveling on this wingtip, you have to rotate it around using the Gizmos or the Keyboard-Shortcuts, which are accessible with much less effort.

I am still missing this little spot on the tip of the Deltawings where you can place something in a 90° angle.
