Platform:		Mod Related:	No
Expansion:			
Description			
Resource transfer currently enabled for docked vessels. However presence of correct docking port required to enable docking in order to permit transfers.			
As EVA activity, should allow for fuel/resource hose to be connected between vehicles. Could be made intrinsic to EVA, or via specific small parts like hose reel. Could be used in orbit but main use would be for resource transfers between vehicles/resource ops/rovers etc. on planets where in-flight docking is impractical.
