

Kerbal Space Program - Announcement #5277

Windows platform option will be removed from the Kerbal Space Program tracker

07/27/2015 07:02 PM - Squelch

Status:	New	% Done:	0%
Severity:	Normal		
Assignee:			
Category:	Bug Tracker		
Target version:			
Platform:	Any	Mod Related:	No
Description			
<p>It is very important to know the platform an issue is reported for, so some cleanup of the Kerbal Space Program tracker has been undertaken.</p> <p>The current platform options are:</p> <ul style="list-style-type: none">• Windows - is too generic, so all issues for that platform have now been moved to Win32.• OSX - currently in production, so please use this option if you are on a Mac and running the OSX version of KSP.• Linux - currently in production, so please use this option if you are running a Linux distribution (Ubuntu is fully supported with others via the forum)• Any - This applies if the issue covers all platforms. (use for feature requests, feedback etc) Only use this for bugs when they are confirmed to be cross platform.• Win32 - currently in production, so use this option for all windows issues at this time.• Win64 - not in production at this time. <p>Please help us to help you by setting the correct platform when you post an issue. This will enable the right people to be alerted and for them to look into it.</p> <p>To help with this, we will be removing the Windows option. This will not affect existing issues, and please be assured that Win64 is not completely abandoned.</p>
