#### Description

The bug tracker is currently using an SSL certificate for kerbalspaceprogram.com

Unfortunately it is not a certificate that specifies that it can be used on subdomains so it causes an invalid certificate error on some browsers.

Good bug, could you repost this to the Bug Tracker section of the Forums, once that section has returned. Thanks. I'll leave this open until then.

##### #2 - 08/16/2013 11:00 AM - Ted

- Category set to Bug Tracker

- Severity changed from Petty to Unworthy

##### #3 - 10/23/2013 07:14 PM - Ruedii

As a note, this is particularly important when accessing from public wifi.

You can still ignore the warning and continue, and some browsers let you place an exception, so it is not that important. However, you should do all you can encourage users to use SSL when connecting from public wifi as it prevents account sniffing.

##### #5 - 07/17/2016 09:23 AM - TriggerAu

- Status changed from New to Needs Clarification

##### #6 - 07/19/2016 11:24 PM - \_\_\_\_

- Status changed from Needs Clarification to Resolved

- % Done changed from 0 to 100

"Resolved" by dropping https completely.

##### #7 - 08/11/2016 01:22 PM - TriggerAu

- Status changed from Resolved to Closed
