

Kerbal Space Program - Bug #5924

Male kerbals sometimes ragdoll when EVA'd while hot and sometimes sink

Description

KSP 105 unmodded
bug reproducible
No errors in log file.

When landed on water with a hot (~750K) cockpit internal temp, EVAing a male kerbal sometimes causes it to ragdoll and fall off the ladder. Said kerbal then sinks to the bottom of the sea if he doesn't get trapped in something.
Female kerbals appear not to be affected.
