

Kerbal Space Program - Bug #5933

New MK1 Cockpit Transforms into Old MK1 cockpit - Vanilla

11/12/2015 02:59 AM - Anonymous

Status:	Closed	Start date:	11/12/2015
Severity:	Normal	% Done:	100%
Assignee:			
Category:	Parts		
Target version:			
Version:	1.0.5	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:			

Description

Started a new career in 1.05
Make anything with new MK1 cockpit and save.
Go to launch it.
Old MK1 cockpit replaces it on runway.
Go back to VAB.
The vehicle is using the old MK1 cockpit.
Load saved plane.
The vehicle is using the old MK1 cockpit.

What method was used to update the game to 1.0.5 please?

From the description, it sounds like you still have the old part folders present. Does this happen with the inline cockpit too?

Please could you verify the installation if using Steam, or attempt a clean installation if using another deployment.

It would be interesting to see what your folder structure looks like, so if you could perform the following steps, it would help in understanding the problem.

1. Find the installation location of KSP in windows explorer.
2. Browse to the Gamedata folder -> Squad -> Parts -> Command
3. Click any white space in the address bar (top) so the address changes to the full highlighted path, and then right click -> copy.
4. Click Windows button, and type "command" in the text box.
5. Select Command Prompt.
6. In the newly opened command console window, type cd followed by a space, and then right click -> paste followed by enter.
7. Type or copy and paste this line into the command console

```
dir /AD /B > %UserProfile%\Documents\CommandParts.txt
```

followed by enter.

8. Now go to your documents folder and find the CommandParts.txt file and attach it here.

It should contain this:

```
advancedSasModuleLarge  
avionicsNoseCone  
cupola  
externalCommandSeat  
hitchhikerStorageContainer  
inlineAdvancedStabilizer  
inlineReactionWheel  
Mk1-2Pod  
mk1Cockpits  
mk1LanderCan  
mk1pod  
mk2CockpitInline  
mk2CockpitStandard
```

mk2DroneCore
mk2LanderCan
mk3CockpitShuttle
probeCoreCube
probeCoreHex
probeCoreOcto
probeCoreOcto2
probeRoverBody
probeStackLarge
probeStackSmall
probeStackSphere

If yours looks different, the only action left is to reinstall the game after backing up your saves folder if you wish to keep them.

[EDIT]

Alternative to the above, please attach your log

Cannot duplicate in 1.1.3. Probably a corrupted game, as Squelch said. Ignore this one and let it be archived forever.
