Description

Hi. Today when I was playing ksp I found a glitch that when you enter the Astronaut Complex through the runway or the launchpad the background is black! It seems to happen at random but here's how I got it.

1. Launched a plane then crashed it to a building.
2. Reverted back to launch
3. Launched another plane this time crashing into the water
4. Reverted back to the spaceplane hangar
5. Exited the hangar then clicked the runway and after clicked the astronaut complex and voilÃ !

Here's a screenshot of it
