Description

I run a clean Version of 1.05. I have played this game for quite some time and have a space station in a high orbit of the sun. When I go to the space center, trying to activate it, the game only displays a Star Map. When i try to get back to the space center, everything is stars only and I cannot click anywhere or see anything that makes sense.

Outside from this space station (mir #1 in the savefile) everything seems to run fine. I had this problem before with other vessels. Also when I try to load any game from the starmap screen, all the other saves show only stars. When i restart the game, the problem is fixed. However as soon as I try to fly with my Mir space Station again, the problem returns.

I attach my latest save file and a screenshot of the bug. I hope you can help.

Thanks for helping this great game btw. :)
