### Description

The radial attachment node for the FL-T100 fuel tank appears to be out of position. When attaching radially, the attachment point will be inside the edge of the tank rather than right on it.

This issue has cropped up in a previous build before. Refer to bug [#1839](#).

build id = 01174

2016.03.31 at 00:58:13 CEST

Branch: prerelease

This is the 64-bit version of the 1.1 pre-release

To replicate:

- 1) enter VAB
- 2) place any part or parts
- 3) attempt to attach FL-T100 fuel tank(s) to assembly in a radial manner

### History

#### #1 - 04/01/2016 02:55 AM - Gwtheyrn

Addendum: the offset attachment point does not seem to affect collisions. The tank, when attached to the small radial decoupler, will appear to be in contact with the part to which the decoupler is attached, but ejects as expected.

#### #2 - 04/01/2016 03:04 AM - Gwtheyrn

Didn't realize that there is a separate project for 1.1 pre-release. Please remove.

#### #3 - 04/01/2016 06:31 PM - Squelch

- Status changed from New to Closed

- % Done changed from 0 to 100

Wrong project, and i see this has already been raised on the correct one. Closing.
