As it's not crashing for other windows users this is likely a fault on your computer.

Your dxdiag shows two monitors and that your drivers are out of date, please try updating your graphics driver and trying KSP with only one monitor, thank you.

I have the same problem, can post the same screenshot - no crash folders in KSP
it crashes mostly when staging or tearing vehicles apart in various ways, seems to have a problem with multithreading
Win10 64bit
KSP 1.1 - 1230
nvidia driver 364.72 (actual)
