Description			
<p>I just updated to the latest 1.1.0 built and started the x64 exe, went straight to the settings menu and did my usual general and graphics settings. as I hit accept nothing happend. same as I hit apply. then checked the debug window and there was:</p> <p>[Exception]: ArgumentOutOfRangeException: Argument is out of range. Parameter name: index</p> <p>cancel worked to get back to main menu. after entering settings again I have seen it saved my changes.</p> <p>--</p> <p>KSP 1.1.0 (BuiltID 01230) OS: win7 x86</p>

- Status changed from New to Need More Info

Hi acc, can you write up some steps that cause this every time please, I don't know what I need to change to make this occur.

Thank you.

- File KSP.log added

- Status changed from Need More Info to Confirmed

- % Done changed from 0 to 10

Happens to me on 64 bit Linux as well, no mods installed. I changed some key bindings in the main menu settings and got this exception on saving. The exceptions mentions invalid index of screen resolution in the Unity engine, but I changed nothing about that in the settings. After canceling and again setting the keys I got no exception anymore.
