Kerbal Space Program - Bug #9510

[1.1.0] crashes when entering the VAB

04/26/2016 03:46 PM - asdf1324321

Status:	Needs Clarification		**Start date:**	04/22/2016
Severity:	Normal		**% Done:**	0%
Assignee:				
Category:	Application			
Target version:				
Version:	1.1.0		**Language:**	English (US)
Platform:	Linux		**Mod Related:**	No
Expansion:				

Description

Version: 1.1.0.1230
OS: Linux Mint 17.2
Kernel: 3.16.0-38-generic, x86_64
CPU: Core i5 M520, integrated graphics

Steps to reproduce:

- unzip ksp-linux-1.1.0.zip
- rm -rf ~/.config/unity3d/*
- ./KSP_Launcher.x86
- Wait for the patcher to download, click start
- Start New Game, accept default settings
- Dismiss Gene
- Click VAB

Expected outcome: VAB view
Actual outcome: Loader animation starts, then stops, then the application terminates

```
Set current directory to /home/anthony/software/ksp/new/KSP_linux
Found path: /home/anthony/software/ksp/new/KSP_linux/Launcher.x86
Mono path[0] = '/home/anthony/software/ksp/new/KSP_linux/Launcher_Data/Managed'
Mono path[1] = '/home/anthony/software/ksp/new/KSP_linux/Launcher_Data/Mono'
Mono config path = '/home/anthony/software/ksp/new/KSP_linux/Launcher_Data/Mono/etc'
displaymanager : xrandr version warning. 1.4
client has 3 screens
displaymanager screen (0)(LVDS1): 1280 x 800
Using libudev for joystick management

Importing game controller configs
```

How many times did you try this asdf1324321 ?

I am unable to reproduce this after 10 attempts on Xubuntu 16.04

Also, don't just delete the contents of the .config/unity3d folder as you just lost any files in there from other unity games.

#3 - 04/26/2016 04:58 PM - asdf1324321

Four times, same result every time.

The log says something about width? Maybe it's display related?

Incidentally, IIRC Mint 17.2 is based on Ubuntu 14.04.
