Expansion:			

Description

The Shift+Scroll Wheel combination to zoom doesn't work and it makes things very hard, please put this feature into the game.

Hi nickrulercreator.

The mouse scroll wheel is used to zoom the camera view in the following areas:

Space center scene.

Flight scene.

IVA.

Map.

Tracking station.

Spaceplane Hangar.

Mouse scroll wheel with shift will zoom the view in the VAB.

I just tested this with a wireless mouse, and there is no code in KSP to ignore external mice.

Please try another mouse, or a wired mouse, thank you.

This was changed with the 1.2.1 release.

Add customizable binding for Editor Scroll Modifier for Zoom - default to left-command for OSX instead of left-shift.
