

Kerbal Space Program - Bug #9808

Tweakscale error after reverting to hanger with exception report

05/30/2016 11:50 PM - doggonemess

Description

I get a problem with parts disappearing after reverting to VAB. It doesn't seem to be very consistent, except that with wings, it seems to happen with the parts with landing gear connected (but not all the time). I attached a screenshot with the part missing and the report from the Exception Detector. I have no idea why it happens, but I can reproduce it reliably. I'm running 58 mods right now, so it's very likely that something is configured wrong. I just wanted to get it out there.

A note on Modded Installs

As it is the place for raising issues to the Core Developers, the bugtracker is only targeted at Unmodded installations of KSP. The developers don't run modded installs and are focused on providing the most stable core experience that they can. Modders can then build on this stable foundation. Furthermore, Mods can introduce unwanted influences that are sometimes hard to track, even if they outwardly deal with something else unrelated. Please consider the testers and ultimately developers time in getting to the heart of the bug as quickly as possible. We therefore kindly ask that any suspected bugs are reproduced and verified in a clean game before reporting.

If you are experiencing issues with KSP and cannot replicate them in a stock install then there is a really good group on the Forum where many of the testers and modders hang out and try and help with issues on Modded Installs. Here is a link to the Modded Support Forum <http://forum.kerbalspaceprogram.com/forums/77-Support-%28modded-installs%29>

Issues logged for modded installs that cannot be replicated will be looked at, but will likely be closed if there is not enough compelling information for a non mod induced bug to pass them to the devs for attention. A good example of this exception might be; a fault in the plugin API that can only be demonstrated by mod installation. Please do involve the mod author(s) in this if you are not one of them out of courtesy.

Sorry buddy but you need to ask the modder.
