### Description

When I have a pod full of experiments, there are times when I want to take just a few of them back out again. ATM, I have a pod that I am trying to load with "new data only" for transporting to an MPL. But I had an accident and two or three surface samples got mixed with the "new" data. But there is no way currently to sort a few experiments out of a pod, or out of a kerbonaut's stash. What I would like is a "take selected experiments" mode (in the form of a button in the pod's context menu?) that shows all the experiments -- where I can set a checkmark, or select, or have a button on each experiment that says "take this experiment".

### History

#### #1 - 07/17/2016 09:57 AM - TriggerAu

- Status changed from New to Needs Clarification

#### #2 - 07/25/2016 06:30 AM - bewing

- Status changed from Needs Clarification to Updated

- % Done changed from 0 to 10

- Version changed from 1.1.2 to 1.1.3
